Camera HTTP API
User Guide

Version 4

2019-9

Revision History	Description	Data
Version 1.0 Revision 1	Initial version	2016-06-01
Version 1.1 Revision 2	1. Add the interface of short connection accessing CGI. 2. Add rtmp port parameter to GetNetPort and SetNetPort interfaces. 3. Add hourFmt parameter to GetTime and SetTime interfaces. 4. Add streamType and interval parameters to GetFtp and SetFtp interfaces. 5. Add schedule parameter to GetEmail and SetEmail interfaces. 6. Add GetPush and SetPush interfaces. 7. Remove enable, action and schedule parameters to GetAlarm and SetAlarm interfaces. 8. Add emailSchedule, pushSchedule and hourFmt to GetAbility interface.	2016-11-07
Version 1.2 Revision 3	1. Add UpgradePrepare 2. Add Shutdown 3. Add GetAuth and SetAuth 4. Add GetCloud and SetCloud 5. Get3G and Set3G 6. GetP2p and SetP2p 7. Add Preview 8. Add rtmp=start and rtmp=stop and rtmp=auth for rtmp 9. Ptz add GetPtzSerial SetPtzSerial GetPtzTattern SetPtzTattern command 10. camera increace GetAutoFocus SetAutoFocus command of focus 11. LED increace GetIrLights SetIrLights GetPowerLed SetPowerLed command 12. Add GetAudioAlarm SetAudioAlarm 13. Add HeartBeat 14. Add GetCrop SetCrop 15. Add GetAutoUpgrade SetAutoUpgrade CheckFirmware UpgradeOnline UpgradeStatus in system mode	2019-4-26
Version 1.3	1. Ptz add GetPtzSerial SetPtzSerial	2019-9-30

Revision 4	GetPtzTattern SetPtzTattern command 2. System delete ImportCfg 3. Security delete GetAuth SetAuth 4. Alarm add SetAudioAlarm 5. Complete the responsed code	

Contents

1 Scope

The document defines a series of HTTP and HTTPS based application programming interface, covering the System, Security, Network, Video input, Enc, Record, PTZ, and Alarm modules.

2 HTTP & Json

2.1 Protocol

Support both HTTP and HTTPS.

And only support the POST method, get and set all through it.

```
POST /cgi-bin/api.cgi?cmd=xxx&token=20343295&paramxxx=xxx HTTP/1.1
```

The payload type is a JSON or file that is specified by Content-Type.

Content-Type = “application/octet-stream” or "application/json"

2.2 JSON

JSON (JavaScript Object Notation) is based on a subset of the JavaScript

Programming Language, Standard ECMA-262 3rd Edition - December 1999.

Request:

```
[
    {
        "cmd":string,
    "action":int,
        "param“:
        {
            "name": val,    // val = string or int
      ...
        },
    }
    ...
]
```

Response:

```
[
    {
        "cmd":string,
        "code“:int, // rsp code, 0:success, others: false
    "value": or "error" // "value" when code = 0, "error" when "code" = 1
        {
            "name": val,    //  val = string or int
      ...
        },
    }
    ...
]
```

2.3 token

Token is the only global certification of developers. Token is required whenever

developers are calling each port. Normally the lease for each token is 3600 seconds and you may regain it after it expires. Please refer to the Login command for the methods of requiring token.

2.4 Abbreviations

For the purposes of the present document, the following abbreviations apply:

M/O Mandatory/Optional

2.5 Definitions

For the purposes of the present document, the following definitions apply:

initial: The initial value of the configuration.
range: The data range of the configuration.
value: The current value of the configuration.
action : Obtain **initial**, **range** and **value** when the value is 1, obtain only the **value** when the value is 0.
channel : The channel number of the current device.

2.6 Example

2.6.1 Get token first

Request：

Post /cgi-bin/api.cgi?cmd=Login HTTP/1.1

Response：

HTTP/1.1 200 OK
Server: nginx/1.14.2
Date: Wed, 25 Sep 2019 06:34:59 GMT
Content-Type: text/html
Transfer-Encoding: chunked
Connection: keep-alive

Pragma: O-cache
Cache-Control: O-cache
Content-Type: application/json; charset=utf-8

```
[
  {
    "cmd" : "Login",
    "code" : 0,
    "value" : {
    "Token" : {
        "leaseTime" : 3600,
        "name" : "011465962723"
      }
    }
  }
]
```

2.6.2 Execute command GetUpnp

Request：

Post /cgi-bin/api.cgi?cmd=GetUpnp&token=011465962723 HTTP/1.1

Response：

HTTP/1.1 200 OK
Server: nginx/1.14.2
Date: Wed, 25 Sep 2019 06:50:49 GMT
Content-Type: text/html
Transfer-Encoding: chunked
Connection: keep-alive
Pragma: O-cache
Cache-Control: O-cache
Content-Type: application/json;charset=utf-8

```
[
  {
    "cmd" : "GetUpnp",
    "code" : 0,
    "initial" : {
      "Upnp" : {
```

```
        "enable" : 0
      }
    },
    "range" : {
      "Upnp" : {
        "enable" : "boolean"
      }
    },
    "value" : {
      "Upnp" : {
        "enable" : 0
      }
    }
  }
]
```

Note: Either cmd or token or both should be existed when requesting URL.

2.7 Preview

Protocol	RTMP
Request URL	rtmp://192.168.2.120/bcs/channel{channelId}_{streamName}.bcs?token=TOKEN&channel={channelId}&stream={streamType}
Field	Description
token	The only global certification of developers. Please refer to the Login command for the methods of requiring token.
channel	The channel number of the device (channel id)
stream	Stream type[0,1,2]
Note : The correspondences between the streamName and streamType in Request URL is shown as follow: Main Stream： streamName=main, streamType=0. Sub Stream： streamName=sub, streamType=1. Extern Stream： streamName=ext, streamType=2.	

2.8 Short Connection

The short connection interface is for users to skip the process of logging in to the IP Camera to get token. In this way, users just need the user name and password to access the IP Camera easily. Here is how short connection works.

e.g. Previewing:

rtmp://192.168.2.128/bcs/channel0_main.bcs?
channel=0&stream=0&user=admin&password=123456
e.g. Snapping picture:

http://192.168.2.128/cgi-bin/api.cgi?
cmd=Snap&channel=0&rs=Get&user=admin&password=123456

3 commands

3.1 System

3.1.1 GetAbility

- **Interface Description**

It is used to get system ability of appointed user.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=GetAbility&token=TOKEN

- **Post Data**

Data example
[{

```
  "cmd":"GetAbility",
  "param":{
   "User":{
    "userName":"admin"
   }
    }
 }
]
```

Field description

Field	Description	M/O
userName	User name, it should be consisted of less than 32 characters, if the user name is NULL, then it would get current user ability.	M

- **Return data description**

Return data correctly

Each domain is corresponding to a functional module. The permit field marks access right, validating in least significant three bits: the most significant bit indicates execution permission, the first bit indicates revision permission, and the second bit indicates read/write permission. The ver field indicates the version number. 0 means the feature is not supported in that version, nonzero means the feature is supported. Different version numbers indicate those certain functional modules support different functional options.

```
[
  {
    "cmd" : "GetAbility",
    "code" : 0,
    "value" : {
      "Ability" : {
        "3g" : {
          "permit" : 0,
          "ver" : 0
        },

Field description

Field	description
Dst	Daylight Savings Time
enable	Enable Daylight Savings Time
endHour	The end of Daylight Savings Time(Hour)
endMin	The end of Daylight Savings Time(Minute)

endMon	The end of Daylight Savings Time(Month)
endSec	The end of Daylight Savings Time(Second)
endWeek	The end of Daylight Savings Time(Week)
endWeekday	The end of Daylight Savings Time(Day)
offset	Time offset
startHour	Daylight Savings Time starting time(Hour)
startMin	Daylight Savings Time starting time(Minute)
startMon	Daylight Savings Time starting time(Month)
startSec	Daylight Savings Time starting time(Second)
startWeek	Daylight Savings Time starting time(Week)
startWeekday	Daylight Savings Time starting time(Day)
Time	System time
year	Year
mon	Month
day	Day
hour	Hour
min	Minute
sec	Second
timeFmt	Time format
timeZone	Time zone
hourFmt	Hour format,0 is for 24 hour clock， 1 is for 12 hour clock

3.1.4 SetTime

- **Interface Description**

It is used to set time of the device.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=SetTime&token=TOKEN

- **Post Data**

Data example

[
{
"cmd":"SetTime",
"param" : {

```
      "Dst" : {
        "enable" : 0,
        "endHour" : 2,
        "endMin" : 0,
        "endMon" : 10,
        "endSec" : 0,
        "endWeek" : 5,
        "endWeekday" : 0,

  "netThroughput" : 76
  }
  }
  }
]

Field description	
Field	**description**
codecRate	Bit rate
cpuUsed	CPU load
netThroughput	Ethernet port throughput

3.1.8 GetHddInfo

- **Interface Description**

It is used to get hard disks or SD-Card information of device.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=GetHddInfo&token=TOKEN

- **Post Data**

Data example

[
  {
  "cmd":"GetHddInfo"
  }
]

Field description		
Field	**Description**	**M/O**

- **Return data description**

Return data correctly

[
  {
  "cmd" : "GetHddInfo",
  "code" : 0,
  "value" : {
  "HddInfo" : [
  {
  "capacity" : 30571,
  "format" : 1,
  "id" : 0,
  "mount" : 1,
  "size" : 8949
  }
  ]
  }
  }
]

Field description	
Field	**description**
capacity	The capacity of HDD or SD card(Mb)
format	Whether it is formatted or not
id	Index for HDD or SD card
mount	Whether it is mounted or not
size	The remaining capacity (Mb)

3.1.9 Format

- **Interface Description**

It is used to format hard disks or SD-Card.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=Format&token=TOKEN

- **Post Data**

Data example

```
[
 {
  "cmd":"Format",
  "param":{
   "HddInfo":{
    " id":[
      0
    ]
   }
  }
 }
]
```

Field description

Field	Description	M/O
id	Index of the hard disk or SD-Card that you want to format.	M

- **Return data description**

Return data correctly

```
[
  {
    "cmd" : "Format",
    "code" : 0,
    "value" : {
      "rspCode" : 200
    }
  }
]
```

Field description

Field	description

3.1.10 Upgrade

- **Interface Description**

It is used to upgrade the firmware of the device. Must send cmd UpgradePrepare first

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=Upgrade&clearConfig=%d&token=TOKEN

- **Request parameter description**

Parameter	M/O	Description
clearConfig	M	Whether to clear the configuration mark

- **Post Data**

Data example		
Content-Type: multipart/form-data; boundary=----WebKitFormBoundaryYkwJBwvTHAd3Nukl Referer: http://192.168.2.232/?1466148584152 Accept-Encoding: gzip, deflate Accept-Language: zh-CN,zh;q=0.8 ------WebKitFormBoundaryYkwJBwvTHAd3Nukl Content-Disposition: form-data; name="upgrade-package"; filename="xxx.pak" Content-Type: application/octet-stream xxxxxxxxxx.....(File content) ------WebKitFormBoundaryYkwJBwvTHAd3Nukl--		
Field description		
Field	**Description**	**M/O**
boundary	Delimiter	M
filename	The name of the update file	M
name	Bound to be "upgrade-package"	M

- **Return data description**

Return data correctly

[
  {
  "cmd" : "Upgrade",
  "code" : 0,
  "value" : {
  "rspCode" : 200
  }
  }
]

Field description
Field | **description**

3.1.11 ExportCfg

- **Interface Description**

It is used to export configuration files of the device.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=ExportCfg&token=TOKEN

- **Return data description**

Return data correctly
CONTENT_TYPE=application/oct-stream: Content-Disposition: attachment;filename="config.tgz" +xxxxxxxxxxx.....(File content)

Field description	
Field	**description**
filename	The name of the exported file

3.1.12 Restore

- **Interface Description**

It is used to reset all configurations of the device to the factory default.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=Restore&token=TOKEN

- **Post Data**

Data example

[
{
"cmd":"Restore"
}
]

Field description		
Field	**Description**	**M/O**

      "User" : [
        {
          "level" : "admin",
```

<table>
<tr><td>"userName" : "admin"
}
],
... // There may be multiple users
}
}
]</td></tr>
<tr><td>Field description</td></tr>
</table>

Field	description
level	User competence
userName	User name

3.2.4 AddUser

- **Interface Description**

It is used to set configuration of user.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=AddUser&token=TOKEN

- **POST Data**

<table>
<tr><td>Data example</td></tr>
<tr><td>[
{
"cmd":"AddUser",
"param":{
"User":{
"userName":"GuestUser",
"password":"123456",
"level":"guest"
}
}
}
]</td></tr>
<tr><td>Field description</td></tr>
</table>

Field	Description	M/O

userName	Account name.	M
password	Account password.	M
level	User competence	M
Note : Can add up to 20 users		

- **Return data description**

Return data correctly	

[
{
"cmd" : "AddUser",
"code" : 0,
"value" : {
"rspCode" : 200
}
}
]	

Field description	
Field	**description**
rspCode	Response code

3.2.5 DelUser

- **Interface Description**

It is used to del configuration of user.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=DelUser&token=TOKEN

- **POST Data**

Data example
[{

```
    "cmd":"DelUser",
    "param":{
      "User":{
        "userName":"TestUser"
      }
    }
  }
]
```

Field description

Field	Description	M/O
userName	Account name, limit 1~31 characters.	M

- **Return data description**

Return data correctly

```
[
  {
    "cmd" : "DelUser",
    "code" : 0,
    "value" : {
      "rspCode" : 200
    }
  }
]
```

Field description

Field	description
rspCode	Response code

3.2.6 ModifyUser

- **Interface Description**

It is used to modify configuration of user.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=ModifyUser&token=TOKEN

- **POST Data**

Data example

```
[
  {
    "cmd":"ModifyUser",
    "param":{
      "User":{
        "userName":"TestUser",
        "password":"123456"
      }
    }
  }
]
```

Field description

Field	Description	M/O
userName	Account name.	M
password	Account password.	M

- **Return data description**

Return data correctly

```
[
  {
    "cmd" : "ModifyUser",
    "code" : 0,
    "value" : {
      "rspCode" : 200
    }
  }
]
```

Field description

Field	description
rspCode	Response code

3.2.7 GetOnline

- **Interface Description**

It is used to get all online users' information.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=GetOnline&token=TOKEN

- **Return data description**

Return data correctly

```
[
  {
    "cmd":"GetOnline",
    "code":0,
    "value":{
      "User":[
        {
          "canbeDisconn":0,
          "ip":"192.168.2.166",
          "level":"admin",
          "sessionId":1000,
          "userName":"admin"
        },
        ... // There may be multiple online users.
      ]
    }
  }
]
```

Field description

Field	**description**
canbeDisconn	When the field value is 1, the online user can be forced to disconnect. When the value is 0, the reverse is the case.
ip	The IP address of the online user.
level	User competence for online users
sessionId	Session id distributed to online users by the system, it is used

	to force the user to go offline.
userName	The online user's login account.

3.2.8 Disconnect

- **Interface Description**

It is used to disconnect configuration of user.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=Disconnect&token=TOKEN

- **POST Data**

Data example		

[
{
"cmd":"Disconnect",
"param":{
"User":{
"userName":"userName",
"sessionId":1001
}
}
}
]		

Field description		
Field	**Description**	**M/O**
userName	The online user's login account.	M
sessionId	The session ID which System assigned to the online user.	M

- **Return data description**

Return data correctly
[

<table>
<tr><td><pre>
  {
    "cmd" : "Disconnect",
    "code" : 0,
    "value" : {
      "rspCode" : 200
    }
    }
]
</pre></td></tr>
<tr><td>Field description</td></tr>
</table>

Field	**description**
rspCode	Response code

3.3 Network

3.3.1 GetLocalLink

- **Interface Description**

It is used to get configuration of Local Link.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=GetLocalLink&token=TOKEN

- **POST Data**

<table>
<tr><td>Data example</td></tr>
<tr><td><pre>

Field description

Field	description
initial	The initial value of the Ftp field.
range	The range of the Ftp field.
value	The real value of the Ftp field.
server	FTP server, can fill in the IP address or domain name. At most 127 characters.
port	Port of FTP Server, Limit 1~65535.
anonymous	Whether anonymous or not
userName	FTP account name.
password	FTP account password.
remoteDir	FTP root directory.
maxSize	Maximum size of FTP file.
streamType	The types of the uploading files. 0 is for uploading both pictures and videos, and 1 is for uploading pictures only.
interval	When streamType=0, interval stands for the time of post record, the range is between 30 to 1800 seconds. When streamType=1, interval stands for the time interval, the range is between 1 to 1800 seconds.
schedule->enable	Whether ftp receive the alarm information
schedule->table	The schedule about when ftp receives the alarm information

3.3.9 SetFtp

- **Interface Description**

It is used to set configuration of Ftp.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=SetFtp&token=TOKEN

- **POST Data**

Data example

[
{
"cmd":"SetFtp",
"param":{
"Ftp":{

```
            "server":"pool.ftp.org",
            "port":21,
            "anonymous":0,
            "userName":"name",

  }
]
```

Field description

Field	description
audio	Audio switch.

mainStream->bitRate	Bit rate of main stream.
mainStream->frameRate	FrameRate of main stream.
mainStream->profile	H.264 Profile.
mainStream->size	Resolution.
subStream->bitRate	Bit rate of sub stream.
subStream->frameRate	FrameRate of sub stream.
subStream->profile	H.264 Profile.
subStream->size	Resolution.

3.5.2 SetEnc

- **Interface Description**

It is used to set configuration of Enc.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=SetEnc&token=TOKEN

- **POST Data**

Data example

```
[
  {
    "cmd":"SetEnc",
    "param":{
      "Enc":{
        "channel":"_ChnNum",
        "audio":1,
        "mainStream":{
          "bitRate":6144,
          "frameRate":30,
          "profile":"Main",
          "size":"2560*1440"
        },
        "subStream":{
          "bitRate":160,
          "frameRate":7,
```

3.6 Record

3.6.1 GetRec

- **Interface Description**

It is used to get configuration of record.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=GetRec&token=TOKEN

- **Post Data**

Data example		

[
{
"cmd":"GetRec",
"action":1,
"param":{
"channel":0
}
}
]		

Field description		
Field	**Description**	**M/O**
channel	Index of channel	M

- **Return data description**

Return data correctly

[
{
"cmd" : "GetRec",
"code" : 0,
"initial" : {

"Rec" : {
"channel" : 0,

1111000011000100111111111111111111111"
}
}
}
}
]

Field description

Field	description
channel	Channel number
overwrite	Whether the video files can be overwritten
postRec	Post record time
preRec	Enable pre record
enable	Enable scheduled recording
table	A string with the length of 7 days*24 hours. Each byte in this hour indicates whether it's recording. With the value of 0, the recording is off, otherwise the recording is on.

3.6.2 SetRec

- **Interface Description**

It is used to set configuration of record.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=SetRec&token=TOKEN

- **Post Data**

Data example
[{ "cmd":"SetRec", "param": { "Rec" : { "channel" : 0, "overwrite" : 1, "postRec" : "30 Seconds", "preRec" : 1, "schedule" : { "enable" : 1, "table" : "111111111111111111111111111111111111111111111111111111111111111111111111

```
11111111111111111111111111111111111111111111111111111111111111111111
11111111111111111111111111111111"
        }
      }
   }
 }
]
```

Field description		
Field	**Description**	**M/O**
channel	See also GetRec	M
overwrite	See also GetRec	O
postRec	See also GetRec	O
preRec	See also GetRec	O
enable	See also GetRec	O
table	See also GetRec	O

- **Return data description**

Return data correctly

```
[
  {
    "cmd" : "SetRec",
    "code" : 0,
    "value" : {
      "rspCode" : 200
    }
  }
]
```

Field description	
Field	**description**

3.6.3 Search

- **Interface Description**

It is used to search video files.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=Search&token=TOKEN

- **Post Data**

Data example

```
[
 {
  "cmd":"Search",
  "param":{
   "Search":{
    "channel":0,
    "onlyStatus":0,
    "streamType":"main",
    "StartTime":{
     "year":2015,
     "mon":1,
     "day":31,
     "hour":1,
     "min":1,
     "sec":1
    },
    "EndTime":{
     "year":2016,
     "mon":6,
     "day":7,
     "hour":23,
     "min":50,
     "sec":1
    }
   }
  }
 }
]
```

Field description

Field	Description	M/O
channel	Channel number	M
onlyStatus	The value 1 means it will only get the data of dates instead of requiring the details of the files. The value 0 means it will get the details information of a certain day.	M

streamType	The stream type of the recordings, “main” is for searching main stream, otherwise is for searching sub stream.	M
StartTime	The start time of the recordings	M
EndTime	The end time of the recordings	M
Noted: Searching a big amount of files might lead to searching time out		

- **Return data description**

Return data correctly

```
[
  {
    "cmd" : "Search",
    "code" : 0,
    "value" : {
      "SearchResult" : {
        "Status" : [
          {
            "mon" : 5,
            "table" : "00000000000000000000000011111110",
            "year" : 2016
          }
        ],
        "channel" : 0
      }
    }
  }
]
```

Field description

Field	**description**
mon	Record date(month)
year	Record date(year)
channel	channel number
table	Each byte in the string represent the days of the month, indicating whether it’s recording. With the value of 0, the recording is off, with the value of 1, the recording is on.

Return data correctly (onlyStatus 为 0)

```

3.7.4 SetPtzPatrol

- **Interface Description**

It is used to set configuration of PtzPatrol.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=SetPtzPatrol&token=TOKEN

- **POST Data**

Data example

```
[
  {
    "cmd":"SetPtzPatrol",
    "action":0,
    "param":{
      "PtzPatrol":{
        "channel":0,
        "enable":1,
        "id":1,
        "preset":[
          {
            "dwellTime":3,
            "id":1,
```

```
                "speed":10
            },
            {
                "dwellTime":4,
                "id":2,
                "speed":20
            },
            ... // There may be multiple preset.
        ]
      }
    }
  }
]
```

Field description

Field	Description	M/O
channel	IPC channel number.	M
enable	Whether enable the preset or not	M
id	ID number of Patrol.	M
Preset->dwellTime	Patrol time	M
Preset->id	ID number of preset. Range [1~64].	M
Preset->speed	Patrol speed	M
Note : Support up to 16 preset.		

- **Return data description**

Return data correctly

```
[
  {
    "cmd" : "SetPtzPatrol",
    "code" : 0,
    "value" : {
      "rspCode" : 200
    }
  }
]
```

Field description

Field	description
rspCode	Response code

3.7.5 PtzCtrl

- **Interface Description**

It is used to control the operation of PTZ.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=PtzCtrl&token=TOKEN

- **POST Data**

Data example

[
{
"cmd":"PtzCtrl",
"param":{
"channel":0,
"op":"Auto",
"speed":32
}
},
{
"cmd":"PtzCtrl",
"param":{
"channel":0,
"op":"Stop"
}
},
{
"cmd":"PtzCtrl",
"param":{
"channel":0,
"op":"ToPos",
"id":1,
"speed":32
}
}
...
]

Field description

Field	Description	M/O
channel	IPC channel number.	M
op	Operation to control the PTZ.	M
id	Preset id number or Patrol id number.	O
speed	PTZ running speed.	O

- **Return data description**

Return data correctly

```
[
  {
    "cmd" : "PtzCtrl",
    "code" : 0,
    "value" : {
      "rspCode" : 200
    }
  },
  {
    "cmd" : "PtzCtrl",
    "code" : 0,
    "value" : {
      "rspCode" : 200
    }
  },
  {
    "cmd" : "PtzCtrl",
    "code" : 0,
    "value" : {
      "rspCode" : 200
    }
  },
  ...
]
```

Field description

Field	description
rspCode	Response code

Notes :
connect to the ptz command, some parameters are unneeded. you just set it "0".

the value of op is:

"Stop": PTZ stop turning. "Left": PTZ turn left in the specified speed. "Right": PTZ turn right in the specified speed. "Up": PTZ turn up in the specified speed. "Down": PTZ turn down in the specified speed. "LeftUp": PTZ turn left-up in the specified speed. "LeftDown": PTZ turn left-down in the specified speed. "RightUp": PTZ turn right-up in the specified speed. "RightDown": PTZ turn right-down in the specified speed. "IrisDec":Iris shrink in the specified speed. "IrisInc":Iris enlarge in the specified speed. "ZoomDec":Zoom in in the specified speed. "ZoomInc":Zoom out in the specified speed. "FocusDec":Focus backwards in the specified speed. "FocusInc":Focus forwards in the specified speed. "Auto": PTZ turn auto in the specified speed. "StartPatrol": PTZ patrol in the specified speed. "StopPatrol": PTZ stop patrol. "ToPos": PTZ turn to a specified preset in the specified speed.

3.7.6 GetPtzSerial

- **Interface Description**

GetPtzSerial.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=GetPtzSerial&token=TOKEN

- **POST Data**

Data example

[
{
"cmd": "GetPtzSerial",
"action": 1,
"param": {
"channel": 0

```
    }
  }
]
```

Field description

Field	Description	M/O
channel	The channel number.	M

]	
Field description	
Field	**description**
channel	Channel number
scope	Motion detection scope, consisting of 80 columns and 45 rows. Appointed by cols and rows.
cols	The number of col
rows	The number of row
table(scope)	A string with the length of 80*45, each byte represents an area. With the value 1 motion detection is active in that period of time. With the value of 0 no response will be made with any detected motion.
sens	The sensitivity settings for motion detection. It is devided into 4 intervals by time.
beginHour	The start hour.
beginMin	The start minute.
endHour	The ending hour.
endMin	The ending minute.
sensitivity	Sensitivity
id	Section index
type	Alarm type, only “md” is supported.

3.8.2 SetAlarm

- **Interface Description**

It is used to set alarm setting.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=SetAlarm&token=TOKEN

- **Post Data**

Data example

Field description

Field	description

3.8.3 GetMdState

- **Interface Description**

It is used to get state of MD.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=GetMdState&token=TOKEN

- **POST Data**

Data example		

[
{
"cmd":"GetMdState",
"param":{
"channel":0
}
}
]		

Field description		
Field	**Description**	**M/O**

- **Return data description**

Return data correctly

[
{
"cmd" : "GetMdState",
"code" : 0,
"value" : {
"state" : 1
}
}

]	
Field description	
Field	**description**
state	The state of motion detection. The value 1 means motions have been detected and 0 means no motion has been detected.

3.8.4 GetAudioAlarm

- **Interface Description**

GetAudioAlarm.

- **Interface call instructions**

Request URL	http://IPC_IP/api.cgi?cmd=GetAudioAlarm&token=TOKEN

- **POST Data**

Data example		

[
{
"cmd": "GetAudioAlarm",
"action": 1,
"param": {}
}
]		

Field description		
Field	**Description**	**M/O**

- **Return data description**

Return data correctly
[
